Top 5 iPaaS for Enterprise Companies

If your company is on its way to a digital transformation, you need the right Integration Platform as a Service (iPaaS) tool to ensure integrations in order to improve business process agility and outcomes, create internal/operational efficiencies, improve customer service, and eventually reduce time-to-market and drive revenue growth.

However, it can be overwhelming looking for the best iPaaS for enterprise. Between Google search, word of mouth recommendations, and marketing material from potential providers, it can be difficult to know who to trust.

Although iConduct offers an excellent integration platform and we are confident that we can help you solve your integration needs from functionality to security, scalability, and support, we offer a list of the top five options to help you with your evaluation process.

1. Informatica Intelligent Cloud Services

Powered by the CLAIRE engine, Informatica Intelligent Cloud Services (IICS) is the cloud-based Integration Platform as a Service tool that offers several features such as enterprise data integration, application integration, and API management between cloud and on-premise systems.

Users do not have to purchase software licenses and servers to install the software. You only have to pay for the usage of the service. IICS can help you and your company with global, distributed data warehouse and analytics projects.

2. Dell Boomi AtomSphere

Dell Boomi AtomSphere is a cloud-based iPaaS for enterprise used to integrate various software applications. It helps you to design a cloud-based integration process called Atoms, which enables you to transfer data between your on-premise application and the cloud.

You can use it to connect any combination of Cloud, SaaS, or on-premises applications without coding. It has a drag-and-drop UI, data mapping tools, and a comprehensive library of connectors. It also offers support for various integration patterns, allowing you to quickly build integrations.

3. SAP Integration Suite

SAP Integration Suite is an iPaaS for enterprise that allows you to integrate on-premise and cloud-based applications and processes with tools and prebuilt content managed by SAP.

The platform recently won a 2021 Top Rated award from TrustRadius in the Integration Platform as a Service category based on feedback from customers. It has also been recognized as a 2021 Gartner Peer Insights Customers' Choice 2021 for enterprise iPaaS.

4. Workato

Established in 2013, Workato is a 100% cloud-native enterprise iPaaS that offers features such as artificial intelligence (AI), Workbots for Slack, FB Workplace, and MS teams, and intelligent data loss prevention. It allows integration with 1,000+ business applications. Users can create and run pre-built integrations (called recipes) without needing developers or custom integrations.

Workato has a consumption-based pricing model, which means you pay for what you use. However, you won't find their pricing listed on the website. Also, the support is available only through the web and chat.

5. Celigo Integrator.io

Celigo Integrator.io is a multi-tenant next-generation iPaaS that connects and automates processes across thousands of applications. Users can quickly build, manage, and handoff complex integrations at scale, needing fewer IT resources and lowering the total cost of ownership.

The pricing starts at $7,200 per year. It also offers a free trial. Its Flow Builder is a low code, no code visual editor that offers a range of connectors to common applications, databases, and universal protocols.

Conclusion

When it comes to evaluating different iPaaS solutions, potential buyers compare competencies in categories such as evaluation and contracting, integration and deployment, service and support, and specific product capabilities.

Our self-service iPaaS for enterprise ticks all the right boxes for both IT and business users by providing a user-friendly interface and powerful features such as secured agent, full in-memory data handling, and active transaction monitoring. It unifies all entities and attributes of all business applications into a single, web-based dashboard that can operate as a cloud service, on-premise, or hybrid solution. The platform supports all enterprise, legacy, and cloud-based business applications. It eliminates coding on both the source and target application.

What makes iConduct especially attractive for so many is its unique pricing. You can tailor a package to your organization's current situation with flexibility to adjust according to future

needs. It is also the first IPaaS company to offer a license with unlimited connectors and features.

As a customer-focused company, we offer free support via our 24/7 implementation center, ticketing system, and online chat with less than 1 min response time.
